

2023 HYR Fall Soccer Team Name Theme: Inventors and Innovators

This season, the theme is another one that involves people. People who invented or innovated things important to the world around us. Some of those inventions are historically significant like light bulbs and printing presses. Some are fun and playful like the frisbee or the skateboard.

It gets a little tricky with inventors because with really old inventions, we often don't know the names of the inventor. We might know that the Phoenicians pioneered our alphabet a long time ago, or some shipbuilding techniques were invented by an ancient Asian culture, but we may not always have a person to attribute the invention to. So, the focus this season is on specific people when we know them.

Any time the team theme involves people, I focus on as much diversity and representation as possible. With inventors, it would be easy to populate the list with Euro-centric male famous inventors, but that might discount the number of women and people from other cultures responsible for inventions that did not get due credit even though they were equally significant. You may find an invention I listed that actually has a different origin or person we should attribute it to. I tried. HYR families represent a variety of cultures, and if we are putting people on the shirts, I feel it is important that players see themselves represented in those faces of either their team shirt or that of some of their opponents. I hope some players take a deep dive and learn all about their team namesake.

I have tried very hard to find men and women from every continent who have made significant contributions. (Although I have to admit, Antarctica is a tough nut to crack. They really need to step up and deliver. smh...)

So without further adieu, here is a guide to the 2023 Fall Soccer team names.
