

The diagram shows a soccer field with several players. A player in a white jersey is positioned near the bottom center, with the word "White" written below them. A dashed line extends upwards from this player, and a wavy arrow points towards the right. Another player in a white jersey is on the left side of the field. A player in a red jersey is on the right side of the field, with the word "Red" written next to them. A double-headed arrow is positioned below the "White" player. In the top left corner, a player in a blue jersey is standing next to several soccer balls. The entire scene is set against a green background representing the field.

The Game: 4 v4 in the middle (could be 3v3 depending on your numbers). When you play to a boundary player, that player must take a first touch to enter the field. A teammate has to fill the line the boundary player vacated. Boundary players are not stationary. They should be moving along the line to create good passing angles.

Focus:

- Keeping possession.
- Can you transfer the ball quickly from one side to the other?
- Can we find the best forward (deeper) option?
- Speed of Play, Movement off the ball!
